New Features in Vault V16 API (16.0.0 Release)

Release Date: October 28, 2016

We are pleased to bring you the following enhancements to the V16 API in this week's release. Refer to Vault Release Notes for additional information about the 16.0.0 release.

Copying Object Records

Regular Copy

To copy an object record, use Bulk Create Object Records API and add the source_record_id field with the id of the existing record you wish to copy. Adding other fields to this record will overwrite the copied value.

Deep Copy

This new endpoint will copy an object record, including all of the record's related child and grandchild records. A single deep copy cannot copy more than 10,000 records at a time. You can also get the status and results of a deep copy job.

Cascade Delete for Object Records

💬 Feedback

This new endpoint will delete a parent object record and all related children and grandchildren. You can also get the status and results of a cascade delete job.

EDL Hierarchy

In this release, admins can arrange EDLs in a hierarchy. Through the API, you can retrieve these EDL nodes and update their order in the hierarchy.

Notable API Fixes

Issue/Fix	Issue No.
VQL queries on "workflows" object sometimes fail when certain data values couldn't be matched to the requested filter in the WHERE clause.	DEV-101144
