## New Features in Vault V7.0 API (6.5.3 Release)

*Release Date: August 9, 2013*

We are pleased to bring you the following enhancements to the V7.0 API in this week's release.

### Retrieve Latest Document in Steady State

You can now instruct the Retrieve Document API to return the latest document in the steady state. To accomplish this, a new query string parameter *steadyState* can be passed to the API request. If set to *true*, Vault will return the steady state version of the document (if available) instead of the latest version.

### API Bug Fixes

Issue	Description
19083	This fix resolves usage of the <i>auth</i> query string parameter on catalogs' endpoints.
